

# FlashForm SSL

## A Forms Auto-Population Service for the Workers' Compensation Industry

FlashForm SSL is a revolutionary system that allows insurance companies, TPA's, claim management firms and software developers to integrate our extensive form library directly into their desktop and browser based claims management systems. ***Touch a button, and your form is filled out – already populated with all the claim data you capture in your system.*** And not just one, or two, or three of the most popular forms, but any of the 3,600 forms from all jurisdictions across the nation!\*

### FlashForm SSL REST API

There are several ways that your data may be populated on our continually updated forms. The newest method, our Flashform API, allows for automatic update of forms lists, and offers optional features including filing and use instructions for each form. Most importantly in this day and age of data security, ***this process can be completed without your critical data ever leaving your network.***

### Adjustor and Claims Manager Productivity

- Save Time – no searching for forms, or retyping existing information
- Eliminate errors - Forms completed right, the first time.
- Improve Compliance – prompt and accurate reporting eliminates delays and possible fines

### Technical Benefits

- Eliminate need to monitor and update forms
- No need to recreate forms to match state standards
- Reallocate resources to more pressing projects
- Custom Forms and Letters may also be added

\* Currently there are approximately 1,100 forms enabled in the FFSSL system, but any of our forms may be added at customer request.
